Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 6 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 31 March 2001.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.

1. DETAILED ACTION

This action is responsive to the application filed on March 31, 2001. Claims 1-20 are pending. Claims 1-20 represent Corba Jellybens System and Method.

2. Claim Rejections - 35 USC § 102

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

3. Claim 1-20 are rejected under 35 U.S.C. 102(e) as being anticipated by Apte et al. U.S. 6,269,373.

Apte teaches the invention as claimed including a method and system for persisting beans as container-managed fields.

Art Unit: 2157

As to claim 1, Apte teaches a system for providing interaction between a client and a server, comprising:
means for providing at least one property that a bean represents (column 7, lines 18-22, Apte discloses two java beans may be employed that implement the client object 400 and server object 402. What makes a bean different from a pure object is that it has an external interface, called the properties);
means for providing a property field that describes usage of an attribute for the bean (figure 12; column 16, lines 57-65, Apte discloses ...bean data is automatically maintained by the container using a mechanism of its choosing... when a bean chooses to have its persistence container-managed, it specifies which of its fields are to be retained);
means for providing a type that describes the bean (column 2, lines 49-51, Apte discloses the bean may have container-managed fields of both primitive and complex data-types...); and
means for using the bean to provide interaction between a client and a server (figure 7; column 11, lines 14-20, Apte discloses ...because Java client object 704 is attempting to invoke a method within remote EJB 728 similar to client 602 and server 614).

As to claim 2, Apte teaches the system of claim 1, further comprising:
means for mapping the at least one property to a method in a stub (column 7, lines 20-24, Apte discloses what makes a bean different from a pure object is that it has an external interface, called the properties interface, which allows a tool to read what the component is supposed to do and hook it up to other beans and plug it into another environment).

As to claim 3, Apte teaches the system of claim 1, further comprising:
means for providing a handle for the bean (column 16, lines 50-51, Apte discloses obtaining the bean as a handle).

Art Unit: 2157

As to claim 4, Apte teaches the system of claim 3, further comprising: means for using the handle for transaction contact (column 16, lines 35-38, Apte discloses while a session bean has a container-provided identity, called its handle, that identity passes when the session bean is removed by the client at the end of a session).

As to claim 5, Apte teaches the system of claim 1, further comprising: means for indicating if a value of one of the at least one property has changed (column 16, lines 23-27, Apte discloses stateful session beans maintain data consistency...to keep informed of changes in transaction status...).

Claims 6-20 do not teach or define any new limitations above claims 1-5 and therefore are rejected for similar reasons.
